Instructions:

- Attach to a cordless impact driver drill.
- Pull the handle portion until it is locked.
- Pour water into the tank using supplied water bottle.
- Release the lock of the cover. Water is not supplied without releasing the lock. Water feeds automatically when rotating.
- Required rotation: 1000-3000/min(rpm). No water is supplied if the RPM is out of range.
- Water is shut off when rotation is stopped.
- Use positioning guide for accurate drilling

Precautions:

- Do not pull the handle portion while holding the cover.
- Make sure to use clean tap water to prevent malfunctions.

- Do not insert the water bottle tip too deeply or the valve of the tank may be damaged.
- Make sure to use supplied water bottle.
- Do not hold the water tank while drilling.
