

Everything for the Stone Industry

NEW!

STEEL CARBON FIBER RODDING

1/8" X 3/8" X 330' ROLL

For granite, marble, all natural stones,
Engineered stones and quartz counter tops

#133229

Weha has taken Steel Rodding and encapsulated it with 8 Strand premium true grade fiberglass and then reinforced with Carbon Fiberglass.

By having the steel rodding completely enclosed in the carbon fiber, there is virtually no chance of rust from the steel, like traditional steel rodding.

This Triple layer granite rodding material produces incredible strength superior to standard steel rodding, without the worry of rust.

Additionally, the Weha Steel Carbon Fiberglass Rodding is specifically designed with Multiple grooves that run the length of each side of the rodding. These adhesive grooves are made to allow maximum locking bond and adhesion to the glue. This adds additional strength to the steel Carbon Fiberglass Rodding.

Because the Weha Steel Carbon Fiberglass Rodding uses true premium grade fiberglass (not extruded plastic in the shape of rodding) the glue bonds to the fiberglass.

Weha Steel Carbon Fiberglass Rodding comes in a 330 ft roll that can fit the Weha Rodding Stand, as well as other manufacturers rodding stands.

This will save a lot of shop space when compared to storing steel rodding in the shop.

How do you cut the Steel Carbon Fiberglass Rodding? Bolt cutters work perfect. substrates, stove cut outs, blind corners, etc.

Benefits of using Weha Steel Carbon Fiberglass Rodding for granite and stone counter tops:

- Using steel without the side effects of steel
- Combines Steel, Fiberglass, and Carbon Fiberglass for extreme strength
- No Rusting
- Comes in 330' rolls vs having long bars of steel laying in the shop
- Adhesive grooves for stronger glue bond
- True 8 strand fiberglass
- Easy UPS shipping
- Can be used with all counter top materials
- 1/8" x 3/8" x 330' Rolls
- Zero waste
- Cut and install
