

Everything for the Stone Industry

3 Step Hybrid Diamond Polishing Pads. For Wet and Dry use on Granite, Marble, Engineered Stone, Quartz

The technology developed behind these White Resin 3-Step Diamond Polishing Pads is truly an advancement that will change the fabrication process.

In the past, we all knew that in order to get a real deep quality polish, 7 step pads couldn't be beat. Then we started seeing 5 steps. Sometimes they worked on light materials. But when it came to dark granites, we would get good results but still have to use a buff pad.

So when the 3 step diamond polishing system came along, many of us thought: "what is this gimmick? It is possible to work on light materials but the polish will not be there, especially on dark stone".

In reality if you use less expensive 3 step diamond polishing pads, you may not even get that.

In a 3 step diamond polishing system, quality and the price will truly set the pads apart. Cheap simply will not work.

Now Available in 5" size!
