Everything for the Stone Industry

**MATRIX**

**Weha 4" Matrix Diamond Polishing Pads Wet**

## **Weha 4" Matrix Diamond Polishing Pads for Granite, Marble, Engineered Stone, Quartz, Quartzite for High Production Fabrication Shops**

The Weha 4" Matrix 7 Step Granite Polishing Pads were created with a very clear purpose in mind. Weha spent time with very high production shops to find out exactly what they were looking for in a polishing pad system. Practically all of these shops are following a basic workflow. Everything is profiled on the cnc machines. All sinks and vanities are cut out using the finger bits. Most only use 1-3 diamond positions for both the edges and bowls (depending on the profile and stone). Then they free up the cnc and let the fabricators finish the polishing the edges and bowls by hand using air polishers.

Weha threw out the conventional way 7 step granite diamond polishing pads were made and started from scratch. Weha took each individual grit and customized that diamond matrix to do one of several things: cut faster, last longer, soften the bond, make the bond harder, make them more aggressive, a little finer bond, etc. We then synchronized the entire 7 step sequence so that each grit complimented the previous grit and its matrix. The end result is achieving a perfect polish, at the fastest rate of speed, all the while maximizing the life the pads.

This entire process is designed to A) speed up production B) polish the stone as fast as possible to get the piece off the table and on the granite install A frame and C) save the shop as much money as possible on their granite, marble, engineered stone diamond polishing pads.

### **6 Reasons why the Weha Matrix 4" 7 Step Diamond Polishing Pads the best diamond polishing pads for high production shops:**

- 1) Lower grits designed to cut fast, be aggressive and higher grits designed to close the stone quickly with a high gloss polish
- 2) Designed to polish as fast as possible
- 3) 3mm thick for maximizing life
- 4) One 7 step diamond polishing pad sequence to polish all stone coming off the cnc machine
- 5) Designed to speed up production
- 6) Priced as competitive as possible without sacrificing finished results

Part #	Description
50401	4" Matrix Wet Polishing Pad 50 grit
50402	4" Matrix Wet Polishing Pad 100 grit
50403	4" Matrix Wet Polishing Pad 200 grit
50404	4" Matrix Wet Polishing Pad 400 grit
50405	4" Matrix Wet Polishing Pad 800 grit
50406	4" Matrix Wet Polishing Pad 1500 grit
50407	4" Matrix Wet Polishing Pad 3000 grit
50400	4" Matrix Wet Polishing Pad Set of 7
