

# WEHA BEST SELLER!

## WHITE LION

### **Weha White Lion Diamond Bridge Saw Blade is excellent for Quartzite, Granite, and Engineered Stone**

Weha has built this Quartzite Bridge saw blade specifically to cut Quartzite stone. But it also does awesome on Granite and Engineered stone.

**1) What bond will be used for the material you will be cutting?** The White Lion Bridge Saw blade bond was made specifically for quartzite stone.

**2) What type of Matrix will be used?** We used the ARIX Layered diamond Technology for continuous diamond contact to the stone and maximum diamond concentration for extra life.

**3) Do you want life or speed?** Well, we wanted both! By using the ARIX matrix diamond technology with the segment design to remove slurry and "bite" the stone, we have achieved a fast cut of 10-15 ft per minute with exceptional life.

**4) How tall of a segment will be used for the material being cut?** We chose a 20mm segment height based upon the bond of the segment. This 20mm height will achieve the same life of a 25mm Bridge Saw blade but without the risks that come with a 25mm blade (segments breaking, misjudging the blade and jamming into the stone, the last 5mm of the segment not cutting). The Weha White Lion will cut to the core!

**5) What type of core will be used for the job at hand?** We have chosen to stay with the most widely used and respected core in the world, the German made Silent Core. This core will run quite, smooth, and will not fatigue or deflect during cuts.

**14" X 20MM WHITE LION DIAMOND BRIDGE SAW BLADE - 128903**

**16" X 20MM WHITE LION DIAMOND BRIDGE SAW BLADE - 128904**

**18" X 20MM WHITE LION DIAMOND BRIDGE SAW BLADE - 128906**

**20" X 20MM WHITE LION DIAMOND BRIDGE SAW BLADE - 128908**

**24" X 20MM WHITE LION DIAMOND BRIDGE SAW BLADE - 128909**
